Executive Summary

Motivated Information Technology undergraduate with strong hands-on experience in Java, mobile application development, and full-stack web development. Experienced in translating user requirements into system and mobile app designs, and building scalable applications using Java, JavaScript, HTML, CSS, Flutter, and REST APIs. Demonstrated ability to deliver real-world software solutions through practical projects including AI-powered systems, web platforms, and database-driven applications. Passionate about software engineering, problem solving, and contributing to innovative development teams.

Additionally experienced in developing applications using Java and C# with a solid understanding of Object-Oriented Programming (OOP) principles including inheritance, polymorphism, abstraction, and encapsulation. Familiar with relational database design, backend system development, and integration of RESTful APIs for building efficient and scalable web applications. Comfortable working with version control systems such as Git and collaborating in team-based development environments. Continuously eager to learn modern technologies, improve software architecture practices, responsibly utilize AI-assisted development tools to accelerate execution and troubleshooting, and contribute to innovative enterprise, consumer, and fintech software solutions.

PROJECT EXPERIENCE

Mobile Application Developer (AI-Enhanced Ordering System)

He & She Coffee Shop (UNISEL) | Oct 2025 – Mar 2026

- Designed and developed a cross-platform mobile ordering system using Flutter
- Implemented QR-based ordering system to streamline dine-in customer experience
- Integrated Firebase Authentication and Realtime Database for secure login and real-time updates
- Developed AI-powered menu recommendation system based on user preferences and ordering behavior
- Implemented AI-based smart suggestions to enhance user decision-making and improve engagement
- Built natural language ordering feature, allowing users to place orders using conversational input
- Integrated AI-driven order tracking system to provide intelligent real-time status updates
- Developed AI-supported admin dashboard for monitoring user activity, order patterns, and system insights
- Reduced order processing time by approximately 40% through automation and intelligent system design
- Conducted functional testing and debugging to ensure system reliability and performance
- Followed full Software Development Lifecycle (SDLC) including requirement analysis, system design, development, testing, and iteration

Technical Achievements

• Built an AI-powered mobile ordering system that reduced order processing time by 40% through automation and real-time order tracking.
• Developed a cross-platform Flutter application integrating Firebase Authentication and Realtime Database to support secure login and live order updates.
• Designed a Java-based Book Store Management System implementing Object-Oriented Programming concepts including inheritance, polymorphism, interfaces, and exception handling.
• Created database-driven web applications using PHP and MySQL with full CRUD operations, authentication systems, and REST API integration.
• Implemented AI-based recommendation features to personalize menu suggestions and improve user engagement.

Education

Bachelor of Information Technology (Hons)
Institution: University of Selangor
Year of Graduation: 2026

- Dean's List
- Academic Excellence Award
- GPA: 3.90

Foundation in Information Technology

University of Selangor | Dec 2023

- Dean's List
- Academic Excellence Award
- GPA: 3.90

Book Store Management System (Java – OOP Project)
University of Selangor

- Developed a Java-based application implementing core Object-Oriented Programming principles including inheritance, polymorphism, interfaces, and abstraction.
- Designed modular system architecture following software engineering best practices and SDLC methodology.
- Implemented user authentication, book inventory management, order processing, and payment handling modules.
- Applied exception handling and structured file-based data storage to manage transactions and inventory records.
- Designed UML class diagrams and system workflow diagrams to support application architecture.

Web Developer (SRS Bid Solutions)

Sep 2024 – Apr 2025

- Developed responsive web pages using HTML, CSS, JavaScript, and Bootstrap
- Built and customized workflows for bid submission and approval using WordPress
- Improved user navigation and interface responsiveness across devices
- Collaborated with team members using Git for version control
- Assisted in debugging and optimizing system performance

Full-Stack Web Application (Portfolio Project)

- Developed a full-stack web application using PHP, HTML, CSS, and MySQL
- Implemented backend functionalities including form handling, authentication, and database operations
- Designed responsive frontend interface with structured UI components
- Applied CRUD operations for dynamic data management
- Tested and debugged system to ensure smooth functionality

Skills

Programming Languages:

- Java
- C#
- JavaScript
- Python
- PHP
- TypeScript
- Dart
- SQL

Tools & Technologies

- Visual Studio Code
- Android Studio
- Git & GitHub
- Firebase & Supabase Console
- AI-Assisted Development (GitHub Copilot, Cursor, Advanced LLM Prompting)

Frontend Development

- HTML5 CSS3
- Bootstrap
- React (Fundamentals)
  Responsive Web Design
- UIComponent Development

Mobile Development

- Mobile Development
- Firebase
- Supabase
- Android Studio
- Docker

Backend & API

- REST API Integration
- Developed backend functionalities using PHP and MySQL including authentication, data handling, and CRUD operations

Academic Software Engineering Projects

Tuition Management System (Academic Project)

- Developed a web-based Tuition Management System using PHP and MySQL
- Implemented student registration, login authentication, and course management features
- Designed admin dashboard to manage students, classes, and payment records
- Built CRUD functionalities for efficient data handling
- Applied validation and error handling to ensure system reliability

Student Supervision Management System (C# & MySQL)

- Developed a desktop management system using C# and .NET Framework integrated with MySQL relational database.
- Implemented DataGridView interfaces for efficient data visualization and record management.
- Built secure login authentication system for administrators and lecturers.
- Designed CRUD operations and database queries for managing student supervision records.
- Applied structured software architecture and debugging techniques to ensure system reliability.

PROJECTS

Portfolio : misha.github.io
Personal developer portfolio showcasing full-stack and mobile development projects.

- Developed a responsive personal portfolio website utilizing CSS, PHP, and HTML, completing 5 commits across the full web development stack for a foundational Web Application Development assignment
- Designed and implemented frontend styling with CSS (40% of codebase) while architecting backend functionality with PHP (29%) to create a functional full-stack web application

Relevant Coursework

- Object-Oriented Programming (Java)
- Data Structures & Algorithms
- Software Engineering
- Database Management Systems
- Mobile Application Development
- Web Application Development

Database

- SQL (MySQL)
- Microsoft SQL Server (Basic)
- Relational Database Design
- Firebase RealtimeDatabase
- Supabase Realtime Database

Framework & Technologies

- Spring Boot
- .NET Framework
- Node.js
- React
- RESTful APIs
- Microservices Architecture
- Hibernate ORM

Software engineering Practices

- Agile Development
- Conducted functional testing and debugging to ensure application stability before deployment
- Followed SDLC including requirement analysis, design, development, testing, and iteration
